Chigozie R. Nkwopara

Commercial & Business Analyst | Reporting / MI | Power BI

Newcastle upon Tyne, UK | Open to relocation | UK right to work

nkwoparachigozie@gmail.com | +44 7874 813428 | chigozie-nkwopara.netlify.app | linkedin.com/in/chigozie-nkwopara | github.com/Ghenomenon

Profile

Business and data analyst with nearly four years of operational analytics at a logistics business: built stock and delivery KPI reports, gathered requirements and used route and delivery analysis to lift on-time delivery by 12% and cut logistics costs by 8%. MSc Business Analytics (Commendation) and earlier brewery sales experience. Works with Power BI, SQL, Excel and requirements and process analysis. Portfolio projects cover inventory, delivery performance and healthcare, with assumptions and limitations documented. Seeking UK Commercial Analyst, Reporting / MI Analyst, Business Analyst and Data / BI Analyst roles.

Skills

Data and reporting: SQL, Python (pandas, scikit-learn), R, Power BI, DAX, Power Query, Excel (VLOOKUP, XLOOKUP, pivot tables, SUMIFS, conditional formatting, charts), Tableau, data modelling, KPI reporting | Analysis methods: descriptive statistics (mean, median, percentiles), statistical testing, regression and classification models, forecasting, cohort and subgroup analysis | Business analysis: requirements elicitation, stakeholder interviews, process mapping, acceptance criteria, business cases

Projects

30-Day Readmissions | Who should receive follow-up after discharge?

Independent project | Oct 2026

- Cleaned 101,766 hospital encounters (UCI public data) to 69,987 patients, removing repeat stays that would have overstated the evidence
- Built a logistic regression risk model in Python (test AUC 0.65) and showed that following up the highest-risk 20% reaches 37% of 30-day readmissions
- Found that the model flagged African American patients less often than white patients despite equal readmission rates (9.1%), and reported the gap with its limits
- Built a 7-page Power BI report (DAX, Power Query) and an interactive web dashboard covering capacity planning, subgroup checks and a hypothetical business case

USAID Delivery Performance | Where are late deliveries concentrated?

Independent project | 2026

- Analysed 10,324 health-commodity shipments to 43 countries using R, SQL, Power BI and Python
- Showed a 17.2% late-delivery rate for regional distribution centre routing against 5.3% for direct vendor delivery, and recommended a targeted route and customs review
- Found and fixed 2 data-integrity faults that distorted freight-cost averages by 30-40% and doubled row counts in Power Query
- Built a Random Forest classifier with training-only preprocessing (ROC-AUC 0.82, 90% recall on late shipments)

Stockroom Inventory Diagnostic | Which inventory issues deserve attention first?

Independent project, synthetic data | 2026

- Built a 5-page Power BI report with a star-schema model, DAX and Power Query across 3,204 SKUs
- Wrote Pearson correlation measures in DAX and tested a slotting hypothesis (near-zero link between popularity and pick time)

chigozie-nkwopara.netlify.app/warehouse-case-study

MSc coursework | Sales forecasting and customer segmentation

Northumbria University | 2023-2025

- Modelled historical sales demand in Python and R and presented forecasts in Tableau
- Modelled customer data in SQL and presented segment insights and recommendations in Power BI

Professional Experience

Hygiene Assistant | Country Style Foods, Newcastle upon Tyne

Jun 2025 - Present

- Maintain food-safety compliance and documentation standards in a high-volume production environment
- Record and report process data used in hygiene audits and reviews

Retail Team Member | B&M Retail

Nov 2023 - Jun 2025

- Tracked inventory and flagged stock discrepancies
- Resolved customer queries and supported store operations

Branch & Logistics Coordinator (Operations and Data Analysis) | P.N. Igweh Merchants, Nigeria

Jan 2020 - Oct 2023

- Reduced stock discrepancies by 15% relative to the pre-change baseline by introducing regular inventory reconciliation
- Increased orders processed per day by 10% through changes to the picking and dispatch workflow
- Improved the on-time delivery rate by 12% relative to the baseline and cut logistics costs by 8% through route and delivery analysis
- Gathered requirements from suppliers, managers and warehouse staff and built KPI reports for stock and delivery performance
- Analysed stock and delivery data in Microsoft Excel using VLOOKUP and XLOOKUP and descriptive statistics (mean, median, percentiles), with pivot tables, SUMIFS, conditional formatting and charts for reporting

Career break

2017 - 2019

Travelled to Vietnam and volunteered teaching English to children before returning to Nigeria.

Sales Executive | Nigerian Breweries Plc

Jan 2015 - Apr 2017

- Managed 200+ retail, wholesale and hospitality outlets, achieving 95-110% of monthly volume and revenue targets
- Grew territory sales by about 15% a year, opening 30+ new outlets in 12 months
- Tracked sales KPIs to prioritise underperforming accounts, improving their sales by 10-12%
- Used SAP ERP for weekly sales reporting and KPI review; supported forecasting, market intelligence and customer and distributor relationships

Senior Sales Officer | Consolidated Breweries Plc (Heineken)

Mar 2013 - Dec 2014

- Led four sales representatives across 150+ accounts, achieving 95-105% of monthly targets
- Reviewed daily and monthly sales data and reported target achievement, volumes and competitor activity
- Supported forecasting using historical sales, seasonal demand and stock movement; used SAP ERP for weekly reporting and KPI review

Education

MSc Business Analytics, with Commendation | Northumbria University

Oct 2023 - Jun 2025

Data modelling, forecasting, business statistics and data visualisation.

Certifications

- Microsoft Power BI Data Analyst (PL-300) | in progress
- Google Data Analytics Professional Certificate | in progress
