Profile

MSc Business Analytics graduate with commercial, sales and branch operations experience. I use Power BI, SQL and Excel alongside requirements gathering and process analysis to identify performance issues and support business decisions. Seeking Business Analyst and commercial analytics roles.

Skills

Analytics: SQL, Excel, Power BI, DAX, Python, R, Tableau, data modelling and KPI reporting.

Commercial and business: Sales performance reporting, forecasting, account management, market intelligence, requirements gathering, stakeholder communication and process improvement.

Commercial & Analytical Experience

Branch & Logistics Coordinator · P.N. Igweh Merchants

Jan 2020–Oct 2023

- Reduced stock discrepancies by 15% through inventory reconciliation and improved order fulfilment speed by 10% through workflow changes.
- Reduced logistics costs by 8% and improved on-time delivery by 12% through route and delivery analysis.
- Built KPI reporting frameworks and gathered requirements from suppliers, managers and operational teams.

Sales Executive · Nigerian Breweries Plc

Jan 2015–Apr 2017

- Reviewed sales performance and target achievement to identify territory priorities and account opportunities.
- Supported sales forecasting and provided market intelligence on competitor pricing, distribution and product availability.
- Managed customer and distributor relationships, connecting sales plans with day-to-day delivery.

Senior Sales Officer · Consolidated Breweries Plc (Heineken International)

Mar 2013–Dec 2014

- Reviewed daily and monthly sales performance to identify trends and growth opportunities.
- Prepared sales reports covering target achievement, volumes and competitor activity to support commercial decisions.
- Supported forecasting using historical performance, seasonal demand and stock movement.

Education and development

MSc Business Analytics · Northumbria University

Oct 2023 – Jun 2025. Coursework in data modelling, forecasting, business statistics and visualisation.

Microsoft PL-300 and Google Data Analytics Professional Certificate — in progress.

Additional UK Operational Experience

Hygiene Assistant · Country Style Foods

Jun 2025–Present

- Maintain food-safety compliance and documentation standards in a high-volume production environment.
- Record and report operational data on process consistency to support audits and reviews.

Retail Team Member · B&M Retail

Nov 2023–Jan 2024

- Tracked inventory and flagged stock discrepancies.
- Resolved customer queries and supported retail operations.

Career break and volunteering

Between roles · 2017–2019

Career break that included travel to Vietnam and volunteer English teaching for children, before returning to Nigeria.

Selected projects

30-day readmissions · Healthcare analytics

Analysed 69,987 selected historical index encounters using Python and logistic regression, then built a seven-page Power BI report. Evaluated 20,997 held-out encounters and compared follow-up capacity with recorded readmission capture. Created an aggregate web explorer to communicate the workload trade-off.

[Read the healthcare case study](#)

Warehouse order fulfilment · Business analysis case study

Mapped inventory and order handling issues, stakeholder needs, process changes and KPIs from branch logistics experience. Reported internal operational results; retrospective artefacts are labelled as such.

[View case study](#)

USAID supply-chain delivery performance · Public dataset

Analysed 10,324 shipments across 43 countries using R, SQL, Power BI and Python. Compared late-delivery rates by fulfilment route and translated findings into recommendations.

Route comparison: 17.2% late deliveries via regional distribution centres versus 5.3% direct from vendors; recommended targeted investigation of route and customs delays.

[View project](#)

Stockroom Analytics · Power BI warehouse diagnostic

Five-page Power BI report using DAX and Power Query to examine stockouts, overstock and warehouse slotting across 3,204 SKUs. Synthetic data; findings describe a simulated operation.

github.com/Ghenomenon/stockroom-analytics-powerbi

Sales forecasting · MSc coursework

Used Python and R to model historical sales demand and Tableau to communicate findings.

Customer segmentation · MSc coursework

Used SQL to model customer data and Power BI to communicate segment insights and business recommendations.

Methods and practical application

Business analysis: Stakeholder needs, process mapping, requirements and acceptance checks, root-cause hypotheses and KPI definition. The warehouse case study includes retrospective and illustrative artefacts.

Data analysis: SQL for querying; Excel for operational reporting; Power BI, DAX and Power Query for dashboards and data models; Python and R for analysis and forecasting; Tableau for coursework visualisation.
